

FluoroSeal Specialty Valves

FluoroSeal® Lined Plug Valve with EZ-SEAL®

INNOVATIVE SOLUTIONS

FluoroSeal® Plug Valves bridge the gap between function and ease of operation with the **EZ-SEAL® Top Seal & Adjustment System** (patent pending). Ease of adjustment, maintenance scheduling, and an increased sealing capability translate into cost savings on both manual and automated valve applications. Available in both ANSI and DIN standards, the **EZ-SEAL®** sets an industry benchmark by eliminating plug side loading and premature wear on the valve lining.

PROVEN TRACK RECORD

Resulting from our commitment to quality and to customer satisfaction, **FluoroSeal® Plug Valves** are an excellent solution, whatever your processes. And to address even the harshest of applications, we have developed the **Lined Plug Valve** for both ANSI and DIN standards. With a protective coating on the valve body and a locked-in liner throughout the waterway, the **FluoroSeal® Lined Plug Valve** is ideal for even the most corrosive of applications.
